RESTRICTION

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-10, drawn to nucleic acids, classified in Class 536, subclass 23.1 and 24.2.

II. Claims 11-20, drawn to methods for joining an adaptor sequence to a target nucleic acid, classified in Class 435, subclass 6.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P.

§ 806.05(h)). In the instant case, the nucleic acids of invention I are of a broad scope and include naturally occurring nucleic acids and generic linkers. Accordingly, the nucleic acids can be used can be used in a materially different process, such as for synthesizing nucleic acids or in other types of ligation methods or may be incorporated as a part of a vector sequence.

Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-II require different searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
